SOLSTICE LEARNING / SUPPORT ENGINEERING

Docs Q&A

A grounded-answer assistant for platform admins

PRESENTATION + LOCAL DEMO RUNBOOK

THE PROMISE

Answer from the docs, cite the source, or say the docs don’t cover it.

EVIDENCE FIRST

Short excerpts come directly from the matching article.

HONEST ABSTENTION

Below the evidence threshold, return no invented answer.

LIGHTWEIGHT V1

Python standard library; no LLM, API key, or paid service.

IN THIS HANDOUT

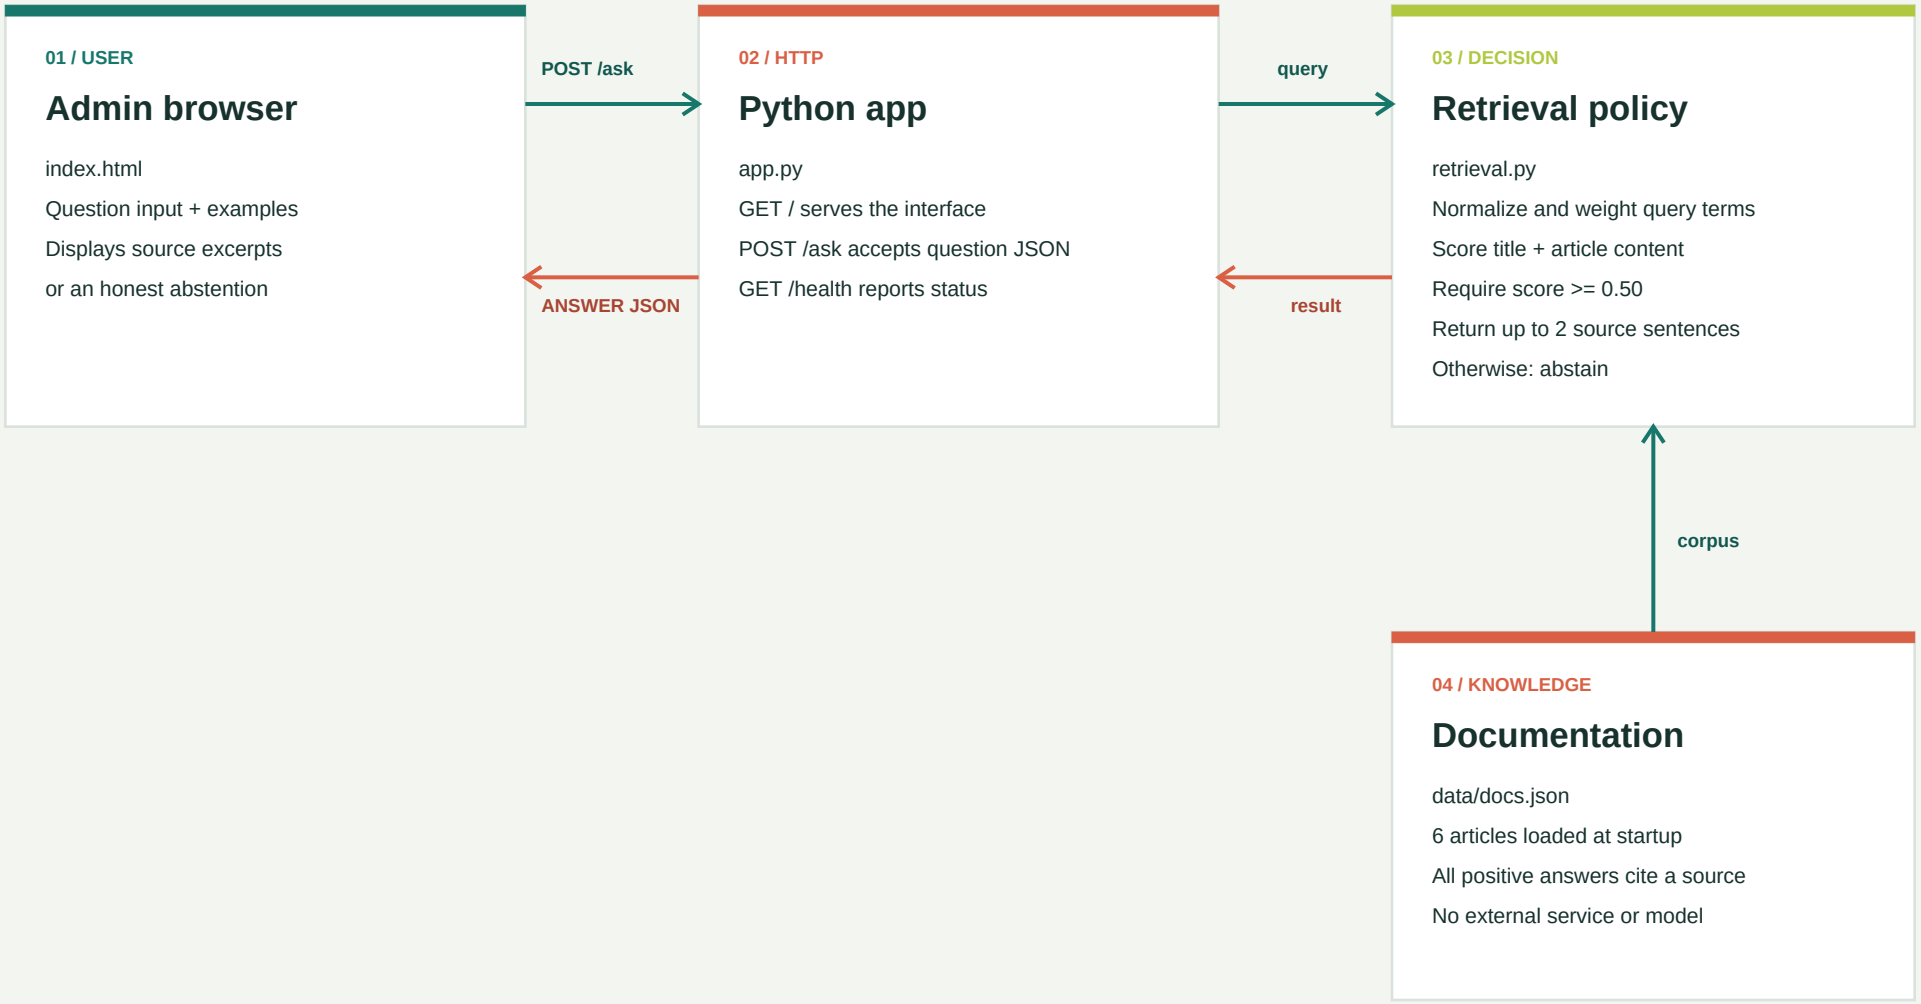
01 Product + design 02 Architecture 03 Run and test 04 Demo outputs

Local demo backed by six synthetic admin articles and five supplied test questions.

SOLSTICE / DOCS Q&A

Answer flow and system boundaries

LOCAL WEB APP / EXTRACTIVE RETRIEVAL / NO LLM



GROUNDED ANSWERS Query -> ranked article -> evidence threshold -> cited excerpts OR documented no-answer

Threshold is a v1 policy (not calibrated confidence); validate against real support questions before production.

Generated from the current implementation. See export_architecture_pdf.py to regenerate.

Run and verify the local app

From the repository root. No virtual environment or package installation is required for this standard-library demo.

DEPENDENCIES **Python 3.10+ only. No pip install, requirements file, LLM, or API key.**

1 CHECK PYTHON

python --version

Use Python 3.10 or later.

2 RUN TESTS

python -m unittest discover -s starter_kit -p 'test_*.py' -v

Checks all five example questions, source selection, key facts, and abstention.

3 START THE APP

python starter_kit/app.py

Server listens on http://127.0.0.1:8000 by default.

4 OPEN THE BROWSER

http://127.0.0.1:8000

Use a sample prompt or enter an admin question. Stop with Ctrl+C.

Optional port: PORT=8001 python starter_kit/app.py

Show the answer and the boundary

Run the question in the browser, then contrast a documented fact with a deliberate no-answer.

SUPPORTED QUESTION

What’s the maximum CSV export limit?

CSV exports are capped at 10,000 rows.

Source: Exporting Reports to CSV / D-03

Answer is extracted from the docs; source is shown in the UI.

NOT COVERED

Can I connect Solstice to Salesforce?

I don’t have an answer for that in the documentation.

No product integration is guessed or invented.

OPTIONAL API CHECK

```
curl -sS -X POST http://127.0.0.1:8000/ask \
  -H 'Content-Type: application/json' \
  -d '{"question":"What is the maximum CSV export limit?"}'
```

Observed JSON response

{"answered": true, "answer": "Important limit: CSV exports are capped at 10,000 rows...",
 "source": {"doc_id": "D-03", "title": "Exporting Reports to CSV"},
 "confidence": 0.785}

The score is a heuristic ranking value, not calibrated probability; UI focuses on answer + citation.

Decision rule: accept the top article at >= 0.50 weighted evidence; otherwise abstain.
